

How can you help the Belrad Institute and the children who are ill?

**By helping to finance courses of
treatment with apple pectin
(to find out more visit our stand)**

Apple pectin speeds up the process of elimination of
radionuclides from contaminated organisms,
particularly caesium-137.

In addition to these treatments, the Institute carries out
measurements of radioactivity in the bodies of the children and
offers training to their families on how to feed themselves,
choice of foods and how to prepare it
in such a way as to limit the radioactive dose.

By making a regular donation
By cheque or direct debit
